SCIENCEINSIDER PHYSICS

Once Again, Physicists Debunk Faster-Than-Light Neutrinos

Five different groups agree that the elusive particles obey Einstein's speed limit after all

8 JUN 2012 · BY ADRIAN CHO

Enough already. Five different teams of physicists have now independently verified that elusive subatomic particles called neutrinos do *not* travel faster than light. New results, announced today in Japan, contradict those announced last September by a 170-member crew working with the OPERA particle detector in Italy's subterranean Gran Sasso National Laboratory. The OPERA team made headlines after they suggested neutrinos traveled 0.002% faster than light, thus violating Einstein's theory of special relativity. The OPERA results were debunked months ago, however. So instead of the nail in the coffin of faster-than-light neutrinos, the new suite of results is more like the sod planted atop their grave.

Ethical duty

Whereas regulators of human subjects research often view data sharing solely in terms of potential risks to subjects, we argue that the principles of human subject research require an analysis of both risks and benefits, and that such an analysis suggests that researchers may have a positive duty to share data in order to maximize the contribution that individual participants have made.

Data journal

List of data journals

(b) Kindling, Maxi; (b) Strecker, Dorothea

This document describes a dataset that aggregates information about 135 data journals.

Data journals focus on the publication of data papers – a specialized publication type describing datasets, their collection and reuse potential that is peer-reviewed, citable and indexed.

This dataset includes a comprehensive list of data journals that was compiled by aggregating existing sources, as well as an overview of these sources.

The list is continually updated on GitHub, where additional information on data journals (URLs of data journal homepages) is provided: https://github.com/MaxiKi/data-journals

n.b.- Gilmore is on editorial board.

- Could be extra pub
- Especially good for early-career researchers

T SENT YOU THE DATA. THANKS! ...THIS IS A WORD DOCUMENT CONTAINING AN EMBEDDED PHOTO YOU TOOK OF YOUR SCREEN WITH THE SPREADSHEET OPEN. YEAH? DOES YOUR COMPUTER NOT SUPPORT . NORM FILES? MAYBE YOU NEED TO UPDATE. SINCE EVERYONE SENDS STUFF THIS

WAY ANYWAY, WE SHOULD JUST FORMALIZE IT AS A STANDARD.
